M: +44 (0)787 620 8560

Paul Giles advises on high value and complex construction/engineering disputes and is experienced in all relevant forums - adjudication, arbitration, litigation, DAB and international arbitration. Paul also focuses on working with project teams on live projects before disputes arise helping the project teams manage change/risk.

Paul has significant experience in the oil and gas, power (including nuclear), water and heavy engineering sectors. Paul has also worked on major infrastructure projects both within the UK and internationally. As a result, Paul has experience of contracts commonly used on international projects as well as the dispute resolution mechanisms on those projects (from dispute review boards to international arbitration). Domestically, Paul has worked extensively on all the commonly used standard forms ranging from NEC3, JCT, IChemE, MF1 to LOGIC.

## EXPERIENCE

- Advised a multi-national conglomerate on issues relating to turbine installation on an onshore wind farm and delay/disruption and loss of profit claims arising as a result.
- Advised an airport company on claims from a main works contractor on a new runway project (GBP100 million), including very significant claims relating to earthworks and AGL systems.
- Advised a rail operator on substantial claims from a contractor relating to complex contractual interpretation issues, misrepresentation and delay claims.
- Advised a statutory undertaker on the resolution of GBP70 million of claims from a framework contractor, including high volume, low value repair and maintenance works and a large number of significant network infrastructure projects (amended NEC3 contract).
- Advised a major gas operating company based offshore in the far east of Russia on very significant deficient design claims relating to the design and construction of one of the world's largest integrated oil and gas projects (with specific focus on an onshore processing facility).
- Advised an operator company on claims arising relating to deficient refurbishment of BOP units for offshore rigs in an area of
