Isn't the whole point of a black box to tell you exactly what happened? AI's explainability conundrum.

19 April 2019

Sitting at 36,000 feet over the Atlantic writing this article, I'm unusually aware of the traditional use of the phrase "black box:" an aircraft's flight data recorder, there to let investigators understand what went awry should the worst happen. It seems odd that a device whose purpose is to provide an explanation should so often be called upon as a metaphor for the unexplainable.

FINANCE AND MARKETS GLOBAL INSIGHT

On 23 June 2016, the UK electorate voted to leave the European Union in a so-called Brexit referendum. The exit result was a surprise for many working in the finance sector. The change will impact the position of the UK under critical legislation such as the Capital Requirements Regulation, European Market Infrastructure Regulation, Market Abuse Regulation and many other Regulations and Treaties applicable in the UK. We will also see a change as to the role of the UK in significant market initiatives such as the Capital Markets Union. It is likely that these changes will present both threats and opportunities. Until policy is clearer, we will comment on some of the existing challenges caused by EMIR and similar EU Regulations.

Technology sector poised for big data wave in finance and sales departments – DLA Piper European Tech Index

12 DEC 2018

Harnessing big data is becoming standard practice for IT and marketing teams in technology, but DLA Piper's 2018 Tech Index reveals that a revolution may now be underway in finance and sales departments as well. Responses from 350 tech sector senior executives in Europe indicate that compared to 2016, organizations are increasingly identifying new opportunities in these additional departments, indicating a move towards widespread adoption of big data in the tech sector.

Sustainability and ESG

The global technology sector is poised to lead the transition to a sustainable future. Technology companies are accustomed to thinking ahead of the curve and innovating on Sustainability and Environmental, Social and Governance (ESG) issues in order to gain a market advantage and provide solutions to global social issues such as environmental issues and workplace diversity.

Pursuing sustainability is a relentless and complex process in which the yardsticks for success are constantly evolving. For smaller companies, aligning their business objectives with their sustainability vision is not always enough to ease the demands for commitments to ESG. For example, a company which develops renewable energy technologies may have a strong environmental sustainability agenda but still have gaps in its handling of wider social issues such as employment practices and community engagement. For larger companies there is an increasing expectation to not only maximize shareholder value but take a broader role in addressing society's most pressing issues.

ETHICS AND INNOVATION

With businesses collecting more data, their understanding of consumers, employees and supply chains is changing. As businesses considerations account for both their investment performance as well as their social performance there is a convergence of business and human rights agendas. Issues related to business ethics, data management, privacy concerns, consumer litigation risks, and regulatory compliance are now all in play. High-profile data breaches in the industry have also heightened concerns not just about the security of data but the applications from it. Technology companies need to build the trust of stakeholders - for example, by improving data governance through audit processes to assure the integrity of data and by increasing accountability and transparency in use of consumer data. Other ethical issues concern fairness and influence. For example, AI and robotics can be used help to eliminate bias in hiring processes but, at a time when the focus on ensuring diversity has never been greater, AI learning has also been shown to foster implicit gender and racial bias.

EMERGING COMPANIES AND VENTURE CAPITAL INVESTMENT

Corporate investors are investing heavily in emerging companies that seize upon the opportunities ESG issues present. And start-ups understand that integrating ESG policies and practices into their business models allows them to attract these investments and create brand recognition, while laying the foundations for long-term value and growth.

ENVIRONMENTAL SUSTAINABILITY

Technology is essential for the transition to a net-zero low-carbon future. Innovations in cleantech, autonomous vehicles and drones may play a leading role in reducing greenhouse gas emissions, improving on energy efficiency, accelerating demand for renewable energy, and finding solutions for the transformation of our energy systems. A familiar example: digitalization and cloud storage services are transforming business operations by reducing paper usage. The latest iteration of our biannual tech research survey, the European Technology Index 2020, reported that energy-efficient technologies are a key area of interest and growth in the sector.

However, while digital technologies are improving, they continue to face environmental issues, such as energy consumption, materials sourcing issues such as mining of rare minerals, and disposal of unrecyclable e-waste. The pressure to resolve these issues has been growing exponentially as technology integrates more thoroughly into our lives. Pressured by consumers, some companies are striving to mitigate environmental risks through improved product design, closer supply chain oversight and product life cycle management.

DIVERSITY IN TECH

Recent years have seen a marked trend in company responses to improving diversity and inclusion in the technology sector. As discussed in our recent TechLaw Podcasts, data-based findings revealing stark gaps in representation in major technology companies have driven policy shifts, public disclosures and changes in investment strategy across the sector. In particular, there has been a push to address the lack of gender representation both at the board level and in the workforce.
