

Intellectual Property and Technology

DLA Piper is one of the most widely recognized providers of a full range of commercial, intellectual property law, privacy, sourcing and technology law services for leading businesses worldwide.

Our lawyers provide both litigation-related (contentious) and strategic commercial advice to a wide range of industry sectors, helping clients from emerging technology and pharmaceutical companies to established banks and financial institutions achieve their objectives wherever they do business.

Our IPT practice encompasses nearly 500 dedicated lawyers in more than 24 countries, with particular strength in key global markets. Intellectual property and technology law is at the core of any major business transaction or strategic dispute and has become one of the most critical legal areas as companies continue to expand and protect their technologies, brands, products, data and services around the globe.

Our group is recognized worldwide by legal directories and industry members as one of the leading groups of its kind, seamlessly combining multi-jurisdictional reach with local knowledge and experience.

BLOCKCHAIN AND DIGITAL ASSETS NEWS AND TRENDS

New information reporting requirements for cryptocurrency transactions; CFPB involvement in cryptocurrency oversight; NCUA seeks comments on use of DLT and DeFi by credit unions.

Cybersecurity considerations for executives and boards of directors: How recent cyberattack trends and developments inform strategies for reducing cyber-risk

23 August 2021

We review recent trends and costs associated with cyberattacks and analyze how organizations can implement strategies for reducing cyber-risk.

Infrastructure bill passed by the Senate would impose new information reporting requirements on cryptocurrency transactions

23 August 2021

If enacted, the bill would provide for significant investments in roads, bridges, ports, airports, electric grids, water systems and broadband.

Canada legalises single event sports betting, and Ontario is all in

16 August 2021

Global gaming revenue is expected to reach US\$525 billion by 2023. Online gaming and betting activities represent a significant portion of this revenue at an estimated market size of \$66.72 billion USD in 2020. Canadians have shown an incredible appetite for iGaming, despite the fact that regulatory roadblocks to private businesses looking to enter the iGaming industry in Canada leave Canadians with limited options.

This article discusses Bill C-218, *An Act to amend the Criminal Code (sports betting)*, which will come into force on August 27, 2021. While C-218 signals the legalisation of single sports betting in Canada is a significant step towards the liberalization of Canada's legal framework applicable to gaming, its impact on private businesses may be limited until provinces and the federal government solidify and clarify their approach to iGaming.

Plant-based meat alternatives and the state of advertising regulation in Australia

Auditing Colombia's agriculture IP

10 Dec 2012

A DLA Piper team audits Colombia's agriculture-related IP and sought to identify Colombian agricultural innovations which are not protected by patents and may have export value.

Colombia: gateway to South America's Patent Prosecution Highway

10 Dec 2012

Understanding the need for more robust patent laws, the Colombian government is aggressively reshaping its IP system.

Divided court revives divided infringement

10 Dec 2012

A recent Federal Circuit decision restores a type of patent infringement claim that it had extinguished five years earlier. The issue is: can a defendant be liable for infringement of a method claim when no single actor commits all the acts that constitute direct infringement?

Trademark or certification mark? The standards body's dilemma

10 Dec 2012

When standards bodies look to protect the marks associated with their standards, they are faced with a dilemma: should they use trademarks or certification marks? One may think the answer is obvious: "certification" seems to be what standards bodies do, and therefore a standards body should always use certification marks. But the obvious answer is not always the right one. Some standards bodies find that trademarks better fit their needs.

China's patent litigation landscape shifts

5 Sep 2012

China bested the United States to become the No. 1 patent filing country in the world in 2011 by obtaining 526,412 invention patent applications, compared to 503,582 utility patent applications in the US. Of these, 79 percent went to domestic Chinese entities, as compared to 49.2 percent to domestic entities in the US.

Ongoing royalties: a new development in patent damage awards

5 Sep 2012

Following the Supreme Court decision in *eBay, Inc. v. MercExchange, LLC*,¹ injunctions do not automatically follow from a finding that a patent is infringed and not invalid. In cases where an injunction is denied, in lieu of the injunction the district court has the power to award what are called “ongoing royalties,” a relatively new development in patent damages.

Privacy and your business

5 Sep 2012

Privacy has become an issue that 21st century business leaders and GCs cannot ignore or leave to the engineers. In the information age, personal data is a key asset for many businesses and a centerpiece of business opportunities.

Vice Chancellor of the Delaware Court of Chancery**

20 Dec 2011

Embryonic stem cell derivations are not patentable in the EU

20 Dec 2011

The Court of Justice of the European Union (CJEU)¹ ruled in *Brüstle v Greenpeace*,² that processes involving derivation of stem cells from a human embryo at the blastocyst stage, entailing the destruction of that embryo, cannot be patented.

Brüstle concerns a patent for isolated and purified neural precursor cells derived from human blastocysts. Central to the case was the interpretation of Article 6(2)(c) of Directive 98/44/EC (the Biotech Directive),³ which excludes patentability of inventions involving “the use of human embryos for industrial or commercial purposes.”

The CJEU decision followed Advocate General Yves Bot’s March 2011 opinion that neither totipotent nor pluipotent stem cells from an

embryo that has been modified or destroyed are patentable. In reaching its decision, the CJEU held that the definition of an “embryo” should be read broadly, to include any fertilized ovum whether created by transfer of a nucleus from another mature cell or stimulated to cell division by parthenogenesis. Further, the CJEU decided that processes involving a human embryo are only patentable if therapeutic or diagnostic purposes are applied to and are useful to the human embryo.

The CJEU decision

The CJEU determined that the intent and purpose of the Biotech Directive was to remove any possibility of patentability where human dignity could thereby be harmed. Thus, the concept of “human embryo” must be understood broadly. Accordingly, the CJEU ruled:

- Any human ovum after fertilization, any non-fertilized human ovum into which the cell nucleus from a mature human cell had been transplanted and any non-fertilized human ovum whose division and further development have been stimulated by parthenogenesis constitute a “human embryo.”
- The referring court should ascertain whether a stem cell obtained from a human embryo at the blastocyst stage constitutes a “human embryo” within the Directive’s meaning. However, it was clear from the CJEU’s ruling that such a cell line would not be patentable.
- The use of a human embryo for therapeutic or diagnostic purposes which were applied to the human embryo and were useful to it are *prima facie* patentable.
- If an invention does not itself “use” human embryos, but relates to a product necessitating prior destruction of a human embryo or a process requiring a base material obtained from such destruction, then that invention would not be patentable.

Some research has shown that human embryonic stem cells offer advantages in cellular therapies over other cell lines. By holding that inventions relating to processes for deriving cells from human embryos, or cell lines derived from those processes, are not patentable, the CJEU has reduced the scope within the EU of proprietary protection for inventions relating to embryonic stem cells. Its decision that the definition of embryo should encompass cells derived from parthenogenesis as well as any fertilized ova may also affect those with rights in cell lines and processes covering cell lines derived from fetal tissue.

The decision does not mean such processes or cell lines are not valuable or protectable. Research and innovation will go on and will likely be protected as trade secrets. This could mean that discoveries may be held closely, rather than shared in the scientific community.

There is concern in the industry that in the absence of patent protection, European companies and universities may find it harder to obtain funding for research, and investment may shift to markets that afford patent protection. Because Europe retains a significant knowledge base, it is likely research funding will go on; indeed, because of the *Brüstle* decision, activities enabling stem cell technologies, adult stem cells and iPS cell technologies may grow. In the race toward cellular therapies, companies with pioneering processes using human embryonic stem cell lines will have to decide whether to apply for patent protection in such countries, with no prohibition on others reproducing their work in Europe, or decide not to file for patent protection anywhere, keeping their knowledge confidential and thereby keeping a competitive edge.

The CJEU decision has firmly placed protection of commercial rights in embryonic cell lines, the processes to derive such stem cells and the application of those lines in cellular therapy into the realm of contractual rights. It remains to be seen whether the *Brüstle* decision will affect stem cell research toward therapeutic applications in the EU.

For more information about the CJEU’s decision, please contact:
