

Real Estate

Real estate has emerged as an attractive long-term investment for investors seeking diversification and stable yields in an uncertain economy. As a sector, real estate must both compete with other investment classes and offer a desirable product to end-users whether they are buying or leasing. In addition, many traditional real estate investors are looking to acquire portfolios that transcend borders resulting in the emergence of a global real estate industry.

DLA Piper's global team of 600 lawyers devoted to the real estate sector assists clients throughout the entire life cycle of their investments, wherever in the world the business takes them. We understand the business of real estate, and that understanding is fundamental to our reputation as multidisciplinary deal facilitators.

We offer a full range of real estate services in areas including financing, fund formation, acquisitions and disposals, tax efficiency, land use, environmental law, planning and development, construction and leasing. Our clients benefit from our significant experience in orchestrating high value, long-term projects that involve complex structuring, facilitating negotiations, ensuring tax efficiency, navigating legal and regulatory issues and, when necessary, litigating on their behalf.

- **The Walt Disney Company** in the real estate portion of its US\$71.3 billion acquisition of 21st Century Fox, involving over 350 properties worldwide
- **A Canadian pension fund** in its US\$4.0 billion acquisition of a 180-property logistics portfolio and related management platform
- **North American Properties** in its US\$2.5 billion residential, retail, entertainment, marina, office and hotel development project in New Jersey, one of the largest mixed-use projects in that state's history
- **ASB Capital Management** in the acquisition and subsequent sale of its US\$1.8 billion US data center business
- **Cottonwood Management** in all aspects of its US\$900 million development of Echelon Seaport, one of the largest development projects in Boston. The project includes 733 luxury condominiums and apartments in three towers built over a 125,000 square foot retail podium
- **AEW Capital Management** with respect to joint ventures (including platform/strategic joint ventures), acquisitions, financings and sales of office, multifamily, logistics and retail properties throughout the US, including the US\$385 million acquisition of a private REIT that owns a prominent office tower in New York City
- **Blackstone Real Estate Income Trust, Inc.** in the issuance by Blackstone's first non-traded REIT of up to US\$5 billion of common stock

Sustainability and ESG

In 2019, the global value of professionally managed commercial real estate (CRE) was estimated to be US\$1.6 trillion. Environmental, Social and Governance (ESG) is no longer an emerging trend in this large global asset class – it is now an important component of CRE investment and is integrated into the investment decision-making of many of the world's leading real estate investors. In some jurisdictions, real estate, owners and operators must also contend with social issues, particularly affordable housing, which means taking into consideration property regulations, community engagement, employee relations, brand and reputation.

Increasingly, prudent real estate investors and operators understand that setting and reporting on ESG-related performance indicators – including on energy usage, waste management, greenhouse emissions and employment rights – can have a positive long-term impact on the value of their properties.

Key sustainability and ESG issues in the Real Estate sector include:

- **Green buildings and leases:** With the built environment reportedly responsible for over 40 percent of global greenhouse gas emissions, many builders and developers have been working closely with governments as they strive to achieve emissions targets under the Paris Agreement on climate change. Energy efficient buildings are the tip of the iceberg; the real estate market is also responding to demand for green homes and commercial buildings that feature water-saving and greywater recycling technology, upgraded insulation and a renewable energy supply. Real estate investors and owners have developed green leases that build in sustainability features as legally binding contractual conditions, such as biodiversity protection targets for contractors, retrofitting requirements for landlords and energy usage limits for occupiers.
- **Green financing and impact investment:** Innovative green financing mechanisms have unlocked investment in sustainable real estate. Certain real estate investors are seeking more than economic returns; they also desire to invest in projects and properties that will have a positive social impact (eg, affordable housing; solar projects, wind farms). One challenge for these so-called social impact companies is attracting capital by demonstrating sustainability despite today's competing ESG standards and ratings systems that often fail to capture real performance. Developing ESG due diligence tools can help to identify risks and clear the path for sustainable investment.
- **Increased information, reporting and disclosure requirements:** By harnessing new data tools and technologies, the real estate sector has been improving on both internal and external reporting against sustainability and ESG standards. Many jurisdictions impose mandatory sustainability disclosure requirements, such as the EU's Non-Financial Reporting Directive. Leading businesses also participate in voluntary reporting programs, such as the Leadership in Energy and Environmental Design (LEED) rating system, the Energy Star rating system and Global Reporting Initiative standards. The challenge is in navigating these at times competing reporting systems and keeping up with evolving standards and expectations.
- **Towards a circular economy in the built environment:** A circular economy aims to gradually decouple growth from the consumption of finite resources, rethinking materials sourcing, energy use, energy supply and waste management at all stages of the business life cycle and across the supply chain. Leaders in real estate have applied circular economy principles to save costs while embedding sustainability into their business strategy. Successful real estate businesses have developed smart circular designs which reuse materials or existing structures to create resource efficiencies and minimize waste.
- **Climate change and environmental planning:** Participants in the real estate sector are already well aware that property values are vulnerable to the physical impacts of climate change. Sea-level rise, drought, and heat stress, for example, increase risks to entire metropolitan areas – not only to individual real properties and locations. In some cases, environmental planning laws lag behind the modelling on likely climate scenarios, and developers and investors must take the initiative to prepare for impacts and climate-proof their investments.
- **Regenerative solutions and community benefits:** Real estate projects that fail to engage with local communities risk damaging their reputations. Some real estate companies have built success by ensuring their real estate developments benefit the community – for example, through community revitalization, sensitivity to access to transit, and regenerative solutions.

To discuss the implications of these issues for your business, please contact our ESG leaders.
